

**ADVANCED SOLUTIONS**  
***Retrofit kits***

*Long life to your machine*

*Continuous innovation and modular concept are Karlville Swiss' trademarks: their combination makes it possible to easily implement new features and solutions on your machines throughout their lifecycle.*

*Discover how to always keep up with innovation thanks to our portfolio of retrofit.*

## R01

### ***Dual motor transmission for cross section***

The retrofitting of both the cross sealing and cooling section, as well as the longitudinal sealing and cooling section, is intended to enhance machine performance while simultaneously minimizing maintenance requirements thanks to a new improved machine structure.

The retrofit of the longitudinal section requires an upgrade to the motorization of the cross section, whereas the dual motor update for the cross section can be implemented independently.

## R02

### ***Motion update for longitudinal section***

Production performance can improve by as much as 10%, leading also to decreased machine maintenance and reduced downtime.

**Ready to elevate your  
machine efficiency?**

Contact us today to find out how our retrofit kits can enhance your machine performance and reliability
